DIGITAL LITERACY PROJECT REPORT

🏷️ Title Page

Name: Basavannepa Shiwalingappa Mugad
Registration Number: 24BCY10322
Branch: B Tech
Year: 1st Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: 26-03-2026

📘 1. Introduction

In today's digital age, the ability to use technology effectively and responsibly is essential for students. Digital literacy includes skills such as online communication, safe internet usage, and building a professional digital presence. As a Student Digital Ambassador, this project focuses on creating awareness among peers about important digital practices.

Through this project, I explored various tools and platforms that are useful for students in academics and career development. I also learned about cybersecurity risks, professional email communication, and responsible social media usage. The goal of this project is to help students become confident and safe digital citizens while preparing them for future professional opportunities.

🎨 2. Task 1

For this task, I created a digital literacy infographic using Canva. The infographic was designed to visually explain key concepts such as what digital literacy is, useful digital tools, safe internet practices, professional online presence, and email etiquette. I used a clean layout with icons and short bullet points to make the content easy to understand and visually appealing.

The infographic highlights how digital literacy helps students in academics and future careers, along with practical tips like using strong passwords and maintaining professional online profiles. Canva was easy to use due to its drag-and-drop interface and variety of templates.

One challenge I faced was balancing design and content, as adding too much text made the infographic look crowded. I learned how to present information concisely while

maintaining visual clarity. Overall, this task helped me understand how to communicate important digital concepts effectively using visual tools.

💼 3. Task 2

In this task, I created and updated my profiles on platforms such as GitHub and LinkedIn. These platforms are widely used by students and professionals to showcase their skills and connect with opportunities.

GitHub is mainly used for sharing coding projects and collaborating with others, while LinkedIn is a professional networking platform used to build connections and explore internships and job opportunities. I updated my LinkedIn profile by adding my education details and created a GitHub profile README describing my interests and goals.

In the next four years, I plan to use GitHub to upload my projects and improve my technical skills. I will use LinkedIn to build a professional network, connect with industry professionals, and stay updated on career opportunities. This task helped me understand the importance of maintaining a professional digital presence from the beginning of my academic journey.

💻 4. Task 3

For this task, I explored coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level coding challenge, which helped me understand basic problem-solving and programming concepts. It also gave me confidence to practice coding regularly.

In addition, I created a Digital Literacy Awareness Quiz using Google Forms. The form included five questions related to digital literacy, including multiple-choice and short-answer questions. I also viewed responses using Google Sheets, which helped me understand how data can be collected and analyzed efficiently.

These tools are very useful for students, as coding platforms improve logical thinking and technical skills, while Google Forms helps in conducting surveys and quizzes easily. This task showed me how digital tools can support both learning and collaboration in an academic environment.

✉️ 5. Task 4

In this task, I learned the importance of professional communication through email etiquette. I wrote two formal emails—one requesting an assignment extension and

another applying for an internship opportunity. I focused on maintaining a clear subject line, polite tone, and proper structure.

A common issue in digital communication is sending informal or unclear emails, which can create misunderstandings. For example, a poorly written email without a proper subject or greeting may be ignored by the recipient. This can lead to missed opportunities or delays.

To avoid such problems, it is important to follow email etiquette rules such as being clear, concise, and respectful. This task helped me improve my professional communication skills, which are essential for academic and career success.

🔐 6. Task 5

While researching cybercrime, I learned about phishing attacks and how easily people can be tricked into sharing sensitive information. What surprised me most was how realistic fake emails and websites can appear, making it difficult for users to identify scams.

I also learned about preventive measures such as avoiding suspicious links, not sharing OTPs, and using strong passwords. In India, cybercrime cases are increasing, which makes awareness even more important for students.

As a result of this task, one habit I will change is being more cautious while clicking links or downloading files from unknown sources. I will also verify the authenticity of emails and websites before sharing any personal information. This task made me more aware and responsible as a digital user.

🎯 7. Conclusion (100 words)

This project provided valuable insights into digital literacy and its importance in today's world. I learned about professional online presence, safe internet practices, and effective communication. The tasks helped me explore useful tools and platforms that can support my academic and career growth.

Overall, this project has improved my awareness of digital safety and responsibility. As a Student Digital Ambassador, I feel more confident in guiding others and promoting digital literacy among my peers.
